Please Note: Prior to making this recipe, measure out and pour the 2% milk into ice cube freezer trays. Freeze overnight. Once your butters and oils are melted, separate out 4 grams of the melted butters/oils. Place the 4 grams into a separate bowl. Add 4 grams of titanium dioxide and stir well. Set aside.

Next, add the frozen milk to the remaining melted butters/oils before the addition of the lye water. The heat from the melted butter and oils will melt the frozen milk. Once blended, proceed by adding the water/lye solution.

Then, using another separate bowl, weigh out and pour 908 grams of soap batter. To this add the titanium dioxide paste. Stick blend well.

## Here's How It's Done : Directions

Next, to the uncolored bowl, add the fun soap colorants and stick blend well.

Finally, to each bowl add 42 grams of Blueberry Cheesecake Fragrance Oil and 42 grams of Vanilla White Color Stabilizer. Stick blend to incorporate.

Once you are ready, take the bluish colored soap batter and drop several spoonfuls into the white batter bowl. Then, using a spatula, swirl directly in the bowl. Finally, pour all of the soap batter into the mold.

## Here's How It's Done : Directions

Step 10: Next, moving slowly pour the soap batter into the mold. While pouring, carefully move the soap batter back and forth the whole length of the mold. When the soap has set up enough, take the mixing bowl set aside for the whipped topping, and carefully heap it on top of the soap.

Step 11: When your whipped topping is in place, position several blackberries and leaves onto the top.

Step 12: After 48 hours, place the soap into the freezer for about 4 hours. Then, remove the soap and let it reach room temperature. Then, carefully remove the soap from the mold. When ready cut the soap slices. Allow them to further cure before using.
